

WEEKLY REPORT

Project Title: Online Token Generation System for Government Offices (Gujarat State Level)	
Student ID:24DIT061	IT Semester:4th
From Date:18/01/2026	To Date:24/01/2026

WORK DONE IN LAST WEEK:

Completed Full Frontend Development (HTML, CSS, React.js)

The entire frontend for all modules was successfully completed using **HTML, CSS, and React.js**, as planned in Week 2.

Developed UI modules include:

- **Citizen Portal** (Token booking, service selection, office search)
- **Staff Panel** (Token verification, daily queue view)
- **Admin Dashboard** (District, Taluka, Office & Staff management)
- **State-Level Admin Panel UI**

Implemented features:

- Component-based UI design
- Role-wise separate pages
- Form validations & input UI improvements
- Consistent color scheme and typography

Integrated Basic Frontend Logic

- Connected pages with React state management.
- Created placeholder components for upcoming backend API calls.
- Added loading indicators and error placeholders.

Designed Initial API Structure :

- Defined API endpoints for:
 - Login & authentication
 - Token booking
 - Token retrieval
 - Office/services retrieval
 - Staff token handling
 - Admin controls
- Added Axios setup for future backend integration.

PLAN FOR NEXT WEEK :

1. Start backend setup and create basic APIs.

- Initialize the backend project structure and configure essential packages.
- Create initial APIs for services, offices, and token handling.

2. Implement login and role-based authentication.

- Set up user login for Citizen, Staff, Admin, and State Admin.
- Add role-based access so each user sees only their respective dashboard.

3. Begin connecting frontend with backend APIs.

- Replace mock data with real API responses.
- Test basic data flow between frontend UI and backend endpoints.
- Ensure that login and token booking work with backend communication.
